FELLOE TECHNOLOGY LTD. DEVELOPS CUSTOM SEALANT FOR INNOVA TIRE INTEGRATED TUBELESS TIRE SYSTEM

Taichung, Taiwan -- Felloe Technology Ltd. has been engaged by Innova Tire to develop a custom sealant for Innova's Integrated Tubeless Tire (ITT) technology.

Images: Innova ITT System

Felloe is a research and development company that has developed a variety of innovative products for the bicycle industry. "Our sealant development team welcomes the opportunity to solve complex problems such as that faced by Innova Tire. The Innova ITT system is unique in that the tires are made with an integrated air bladder, however this presents a problem for introduction of sealant given that the special design of the ITT air valve is only 1.8mm in diameter. Based on our experience and know-how in the area of tire sealants, we are confident that we will provide Innova with a solution to meet their exacting needs." said Joe Bruce, leader of Felloe's sealant R&D team.

About Felloe: Felloe Technology Ltd. is a research and development company located in Taichung, Taiwan. Felloe focuses on development of innovative technologies for the automotive industry, bicycle industry, and military applications.

About Innova: Innova Rubber Co., Ltd. was founded in 1995, headquartered in Changhua, Taiwan with factories in Taiwan and China. Innova mainly produces bicycle tires; wheelchair tires; baby stroller tires and all kinds of leisure race tires such as ATV tires; golf cart tires; and motocross tires.
